

Technical transfer seminars & workshops

Improvement of local staff (counter part s) capacity on effective techniques of landslides investigations and countermeasures through seminars & workshops;

SWOT IN GEO-INFORMATION PROVISION

Strength

- **The Government of Ethiopia has given focus to the mining sector which is growing and contributing to the GDP**
- **Geological Survey of Ethiopia (GSE) has undergone restructuring in line with the Government Reform Program to respond the stakeholder and customer need**
- **GSE is implementing its five year ambitious plan aligned to the Growth and Transformation Plan**

Weakness

- **The need to accelerate geo-science mapping according to the customers need**
- **Very limited Airborne Geophysical coverage**
- **Limited application of Remote Sensing and GIS mapping**
- **The need to work aggressively on capacity building on mineral prospectivity and predictivity mapping**
- **The need to get Laboratory ISO certification**

Opportunities

- **Ethiopia is stable country for investment**
- **Ethiopia has established attractive Mining Law, Regulation and Policy**
- **The country has been aggressively developing Good Governance, Service Delivery following the Civil Service Reform Program**
- **Rapid development in the Infrastructure sectors**
- **Other Benefits including incentive mechanisms**

Threats

- **There is global competition for need of raw materials in the mining sector**

CONCLUSIONS

- The geological favourability and minerals potential of Ethiopia are as significant as others
- Geological Survey of Ethiopia has designed ambitious strategic plan of data generation in line with the GTP of the country. The private sectors are also participating in the Mining Sector significantly
- The mining codes and investment climate in the country is attractive
- The Ministry of Mines has created enabling environment in line with the Reform of the Civil Service in order to establish efficient and transparent licensing system
- The Mining sector of Ethiopia is making remarkable contribution to both domestic industry and earning foreign currency

- To accelerate fill in the gaps the geoscience mapping and data generation to the global standard the interests and initiations of **partners** are highly appreciated, including **Airborne Geophysics, Data Management, Remote Sensing and GIS mapping, Geothermal Exploration, Support for Laboratory accreditation, Capacity-building for data generation activities, and Developing beneficiation capacity of raw materials.**
- The Government of Ethiopia is committed to enhance and encourage investment in the sector
- Welcomes you all to cooperate and invest in the mining industry for mutual benefit
